

Sanuk Systems have been building fixed and wireless networks for hotels, resorts and expat communities in Thailand since 2008. We are an Internet Service Provider licensed by the National Broadcasting and Telecommunications Commission (NBTC).

Hotel IP Network

For any hotel and resort, guest satisfaction is a critical revenue driver. Guests today live a mobile lifestyle and they expect to stay connected when traveling. In addition to providing a remote office and home away from home, hotels also face the challenges of generating new revenue and optimizing operations. To meet the current and future expectations, a local IP network keeps you prepared and ahead of competitors by offering guests content as they want it - via a television screen, computer or telephone.

Internet and WiFi

Premium International capacity.
All equipment included as
a managed service.

TV in guest rooms, restaurants and bars

Live TV and Radio channels,
recorded content and licensed
Hollywood movies.

Make your own Resort Information
channel!

Hotel Telephones

Your dedicated exchange with common
hotel features such as call queues,
day/night schedule, forwarding, voicemail
and automatic wake-up calls.

CCTV

An IP-based digital CCTV system
with cameras in corridors and
public areas.

Services

Installation, configuration, management
and support of your services to ensure
a smooth daily operation.

backoffice management
